

What are the symptoms of COVID-19?

The most common symptoms of COVID-19 are **fever, tiredness, and dry cough**.

Some patients may have aches and pains, nasal congestion, runny nose, sore throat or diarrhea. These symptoms are usually mild and begin gradually. Some people become infected but don't develop any symptoms and don't feel unwell. Most people (about 80%) recover from the disease without needing special treatment.

People with fever, cough and difficulty breathing should seek medical attention.

How does COVID-19 spread?

People can catch COVID-19 from others who have the virus. The disease can spread from person to person through:

- small droplets from the nose or mouth which are spread when a person with COVID-19 coughs or exhales. These droplets land on objects and surfaces around the person.
- by touching these objects or surfaces, then touching their eyes, nose or mouth.
- if they breathe in droplets from a person with COVID-19 who coughs out or exhales droplets. This is why it is important to stay more than 1 meter (3 feet) away from a person who is sick.

Protection measures for everyone

Take care of your health and protect others by doing the following:

- Regularly and thoroughly clean your hands with an alcohol-based hand rub or wash them with soap and water.
- Maintain at least 1 metre (3 feet) distance between yourself and anyone who is coughing or sneezing.
- Avoid touching eyes, nose and mouth.

- Make sure you, and the people around you, follow good respiratory hygiene. This means covering your mouth and nose with your bent elbow or tissue when you cough or sneeze. Then dispose of the used tissue immediately.
- Stay home if you feel unwell. If you have a fever, cough and difficulty breathing, seek medical attention and call in advance. Follow the directions of your local health authority.

Protection measures for persons who are in or have recently visited (past 14 days) areas where COVID-19 is spreading

- Follow the guidance outlined above. (Protection measures for everyone)
- Stay at home if you begin to feel unwell, even with mild symptoms such as headache and slight runny nose, until you recover.
- If you develop fever, cough and difficulty breathing, seek medical advice promptly as this may be due to a respiratory infection or other serious condition.

CORONAVIRUS

The infographic is divided into several sections. At the top center, a large illustration of a man wearing a grey face mask has two green starburst icons on his chest, representing the virus. Surrounding him are smaller illustrations of people experiencing various symptoms: a man holding his throat (SORE THROAT), a man blowing his nose (RUNNING NOSE), a man with stars around his head (DIZZINESS), a man holding his head (HEADACHE), a man looking tired (WEAKNESS), a man with a thermometer (FEVER), and a man coughing (DIFFICULTLY BREATHING). To the right, a green box contains the text: "Consult your doctor if you experience these symptoms. Be careful with your health." Below this text is an illustration of a doctor in a white coat and glasses, pointing towards the prevention tips. At the bottom, a green bar contains six icons with corresponding prevention tips: a person coughing into their elbow (STAY AWAY FROM COUGHING PEOPLE), hands being washed (WASH YOUR HANDS), a person wearing a mask (USE PROTECTION MASK), a hand touching a face (DON'T PUT DIRTY HANDS TO YOUR FACE), a cow's head (DON'T TOUCH ANIMALS AND PRODUCTS OF ANIMAL), and a bowl of food being cooked (ALWAYS COOK MEAT AND EGG PRODUCTS PROPERLY).
